# 302 and 307 redirects

302: Found

307: Temporary Redirect

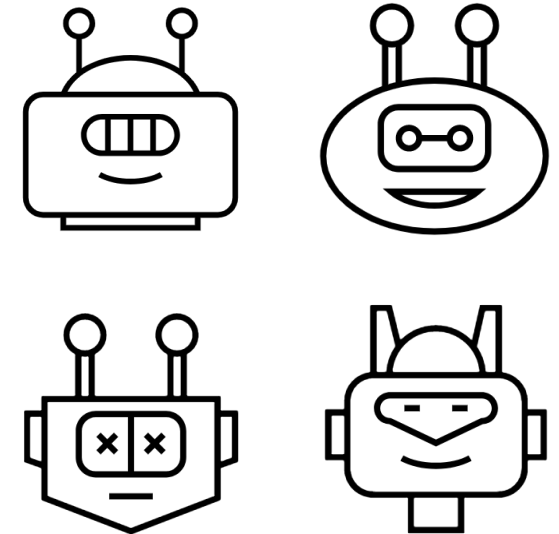

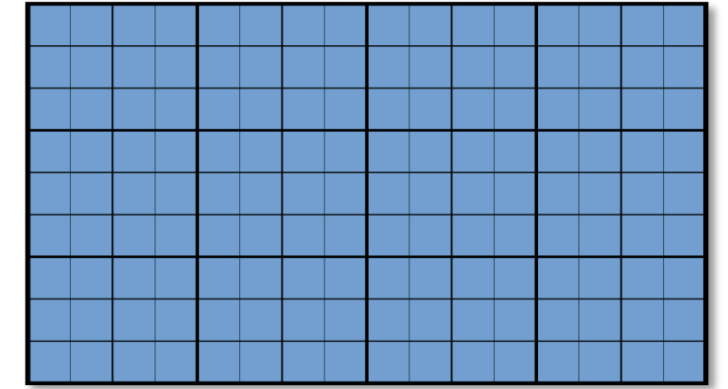

# Key concept

Generally, it is 'safer' to use 302 redirects as their behaviour with search engines is well tested

# Phantom 307 redirects

Why can I see a 307 redirect?

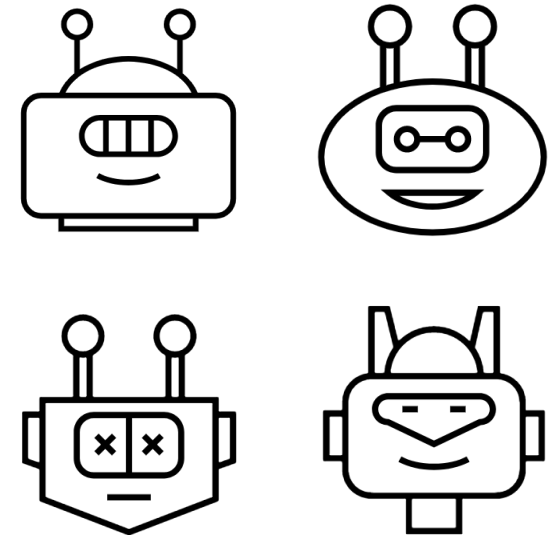

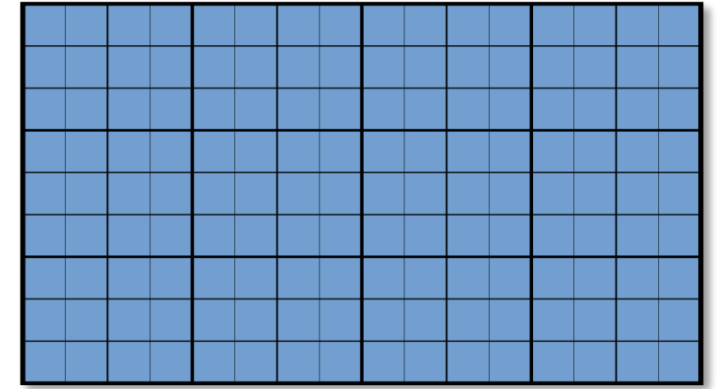

302 and 307 redirects

# Phantom 307 redirects

## HSTS: HTTP Strict Transport Security

A policy that allows web servers to declare that web browsers should automatically interact with the site only using HTTPS.

---

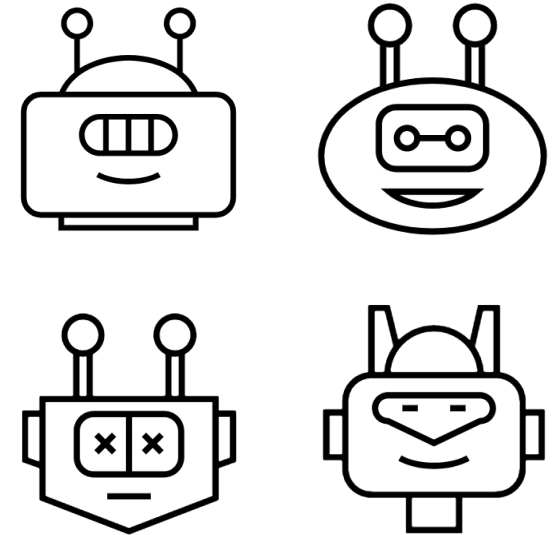

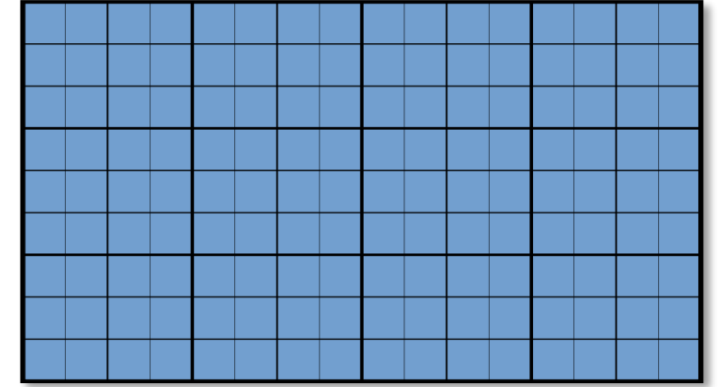

302 and 307 redirects

# Phantom 307 redirects

## HSTS: HTTP Strict Transport Security

A policy that allows web servers to declare that web browsers should automatically interact with the site only using HTTPS.

Browsers can “remember” this policy and if an http request is made, the browser will insert a 307 redirect before the server request is made for the https version.

302 and 307 redirects

# Key concept

Your browser may “insert” 307 redirects where HTTPS is enforced via HSTS.
