Core Web Vitals

Core Web Vitals

Core Web Vitals are 3 **objective** performance metrics that can be **applied to any website**.

Core Web Vitals

Core Web Vitals are 3 objective performance metrics that can be **applied to any website**.

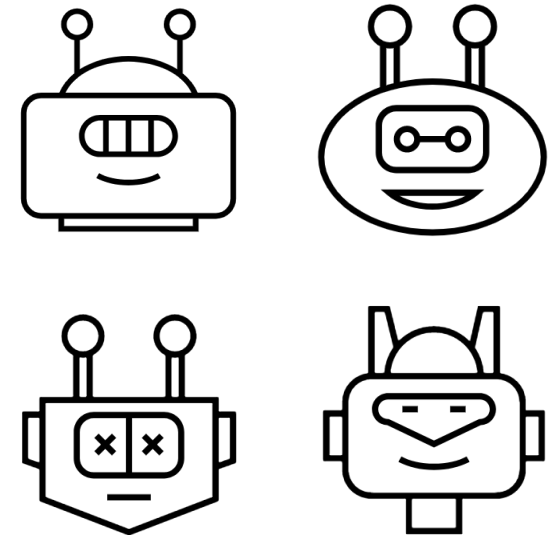

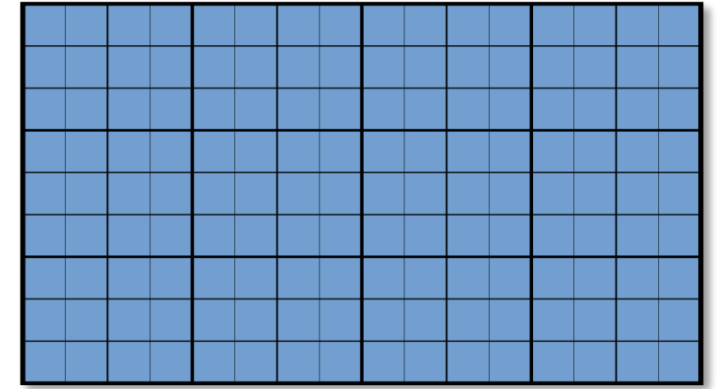

- Largest Contentful Paint (LCP)
- First Input Delay (FID)
- Cumulative Layout Shift (CLS)

Core Web Vitals measurement

Core Web Vitals can be measured in two ways:

- **Lab tests:** One-off tests that can be run either locally or from the cloud
- **CrUX data:** Aggregated data from real users that is submitted via the Chrome browser

LCP

Largest Contentful Paint

Measures *loading* performance. To provide a good user experience, LCP should occur within 2.5 seconds of when the page first starts loading

FID

First Input Delay

Measures *interactivity*.
To provide a good user experience, pages should have a FID of 100 milliseconds or less.

CLS

Cumulative Layout Shift

Measures *visual stability*.
To provide a good user experience, pages should maintain a CLS of 0.1. or less.

Key concept

Core Web Vitals are a small ranking factor described by Google as a 'tie-breaker'
