Search engine algorithms

# What is an algorithm?

“A process or set of rules to be followed in calculations or other problem-solving operations, especially by a computer.”

# PageRank

Google is started considering the link relationships between web pages.

One of their most famous algorithms is “PageRank”

<https://en.wikipedia.org/wiki/PageRank>

# PageRank

Important to note:

- PageRank is not Google's only algorithm!
- It's very old and its impact has changed

<https://en.wikipedia.org/wiki/PageRank>

# PageRank

Fundamentally it described:

- If a page is regularly linked to, it's likely it is a helpful or good page.
- Pages linked from pages themselves that have a lot of links, are very likely to be good (good sites don't link to bad sites).

# “Google” approach

Search engine algorithms

# Key concept

Think of **links** like they are **votes**

# “Google” approach

Search engine algorithms

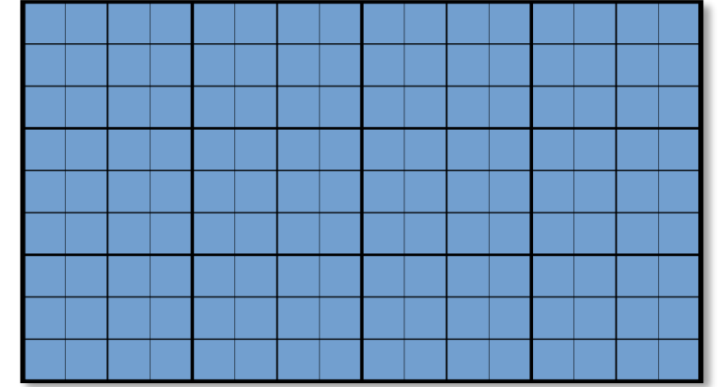

# “Google” approach

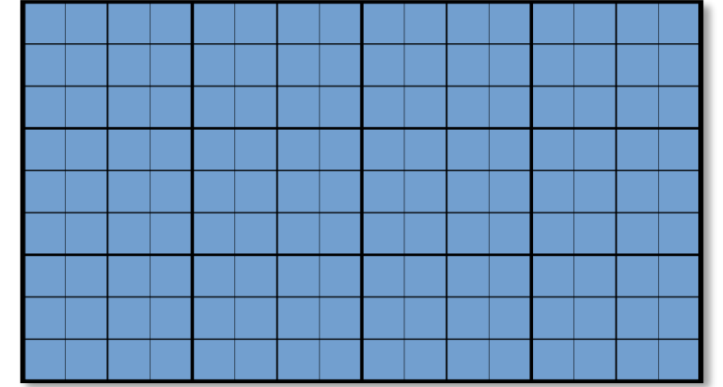

Search engine algorithms

# Key concept

Remember: Not all votes are equal

# Google's algorithm

Is trying to find the best possible answer to the user's query in the shortest amount of time.
